DETAILED ACTION

Reasons for Allowance

1. Regarding claims 13 and 18, the previous art of record teaches of a base station apparatus and method comprising: a plurality of antennas that transmit a plurality of differing transmission data to a plurality of mobile station apparatuses; a storage section that stores a switching pattern, the switching pattern being stored in the storage section in advance and comprising the same number of patterns as a plurality of transmission data defining relationships between the plurality of antennas predetermined times; and the same number of patterns as the plurality of transmission data in repetition and switches around the plurality of transmission data between the plurality of antennas.

The prior art of record fails to teach of defining **relationships between the plurality of antennas predetermined times and where the switching section makes a repeating period of the same and the plurality of transmission data at a switching section that uses number of patterns as the plurality of transmission data.**

Claims 14-17 are dependent upon claim 13, therefore, the examiner gives the same reasons for allowance as discussed in claim 13.
